KUMAR, VINOD

ART UNIT

PAPER NUMBER

1638

MAIL DATE

DELIVERY MODE

06/05/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/523,362	Applicant(s) CHARDONNENS ET AL.	
	Examiner VINOD KUMAR	Art Unit 1638	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 February 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,5,8-11,13,15,18,19,29,32,47 and 49 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,5,8-11,13,15,18,19,29,32,47 and 49 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 11 May 2007 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Status of Objections and Rejections

1. Applicant's response filed in the paper of 02/06/09 is entered.
2. Claims 1, 5, 8-11, 13, 15, 18-19, 29, 32, 47 and 49 are pending.
3. Claims 2-4, 6-7, 12, 14, 16-17, 20-28, 30-31, 33-46, 48 and 50 are previously cancelled.
4. Claims 1, 5, 8-11, 13, 15, 18-19, 29, 32, 47 and 49 are examined on merits in the present Office action.
5. Objection to claims 18, 29, 47 and 49 is withdrawn in light of claim amendment filed in the paper of 02/06/09.
6. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
7. Rejection of claims 8-11 under 35 U.S.C. 112, 2nd paragraph is withdrawn in light of claim amendment filed in the paper of 02/06/09.
8. Rejection of claim 18 under 35 U.S.C. 112, 1st paragraph is withdrawn in light of claim amendment filed in the paper of 02/06/09.

Claim Objections

9. Claim 49 is objected due to following informalities:

Claim 49 is objected for having improper article before "Oxidoreductase" in line 3. It is suggested to change "a" to --an--. This objection has been necessitated due to the claim amendment filed in the paper of 02/06/09.

Double Patenting

10. Claims 1, 5, 8-11, 13, 15, 18, 19, 29, 32, 47 and 49 remain provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2, 10, 11, 12, 15, 16, 19, 22, 23 and 24-27 of co-pending Application No. 11/251,208. Although the conflicting claims are not identical, they are not patentably distinct from each other for the reasons of record stated in the Office action mailed on November 3, 2006.

Applicant's response filed in the paper of 02/06/09 states that Applicant proposes to file terminal disclaimer upon the indication of allowable subject matter (response, pg 5, lines 7-8). Accordingly, the rejection is maintained.

Claim Rejections - 35 USC § 103

11. Claims 1, 5, 8-10, 13, 18-19, 29, 32, 47 and 49 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Lanahan et al. (WIPO, PCT, WO 00/36126, Published 22 June 2000, Applicant's IDS), and further in view of Gan (Biochem. Biophys. Res. Comm., 187:949-955, 1992), Grant et al. (Biochimica et Biophysica Acta, 1490:33-42, 2000) and Samuelsen et al. (Plant Physiol., 118:51-58, 1998) for the reasons of record stated in the Office action mailed 11/06/08.

Applicant traverses the rejection in the paper filed 02/06/09.

Applicant argues Lanahan et al. do not teach transgenic plants with an increased tolerance to salinity, drought or low temperature. Applicant further argues that Gan contains no suggestion to produce transgenic plants with increased tolerance to an

Art Unit: 1638

environmental stress associated with salinity, drought or low temperature (response, page 5, lines 18-25). Applicant further argues that Grant et al. only teaches differential regulation of GRX1 and GRX2 in response to various stresses in yeast, but do not necessarily suggest that overexpressing GRX1 and/or GRX2 would produce enhanced stress resistance in a transgenic plant (response, pg 6, lines 1-11). Applicant while admitting that Samuelsen et al. do teach that expression of yeast Fe(III) reductase enhanced Fe(III) reduction in transgenic tobacco, however, argues that Applicant's invention is more complex because it leads to stress tolerant transgenic plant.

Applicant also argues that some transgenic plants of Samuelsen et al. did not show increase in Fe(III) reduction (response, paragraph bridging pages 6 and 7). Applicant further argues that there is no motivation to combine the cited references to arrive at the claimed invention (response, page 7, lines 11-16). Applicant while admitting that Grant et al. do teach that GRX1/GRX2 expression is enhanced in response to stress conditions, however, questions that one of ordinary skill in the art would not have expected that it would produce abiotic stress tolerance when overexpressed in a plant (response, page 7, lines 17-26).

Applicant's arguments are fully considered but are deemed to be unpersuasive.

It is maintained that Lanahan et al. clearly teach expressing a heat-stable thioredoxin protein (an oxidoreductase stress related protein). Furthermore, Lanham et al. also teach expressing microbial (includes yeast) heat-stable thioredoxin protein in transgenic plants. See for example, abstract; pages 1-2, 6-7, 11-13, 17, 20-31; examples 1-2; SEQ ID NOs: 1-7.

Art Unit: 1638

It is further maintained that Gan teach a nucleic acid sequence encoding a yeast thioltransferase (also called glutaredoxin) having 100% identity to instant SEQ ID NO: 4.

It is further maintained that Grant et al. clearly teach that GRX1 and GRX2 (yeast glutaredoxins) are up-regulated by a range of stress conditions including oxidative, heat shock, osmotic (includes salinity) etc (pg 40, 3rd paragraph). It is further maintained that Grant et al. clearly teach that yeast glutaredoxins are small heat-stable oxidoreductases which play an important role in protecting a cell exposed to environmental stresses. Environmental stress would include salt, drought including low temperature. Applicant's attention is directed to abstract, pages 33, 34; page 35, figure 1; page 36, figure 2; page 37, figure 3; page 38, figure 4; page 39, figure 5; pages 40-41.

Applicant is reminded that it was well known in the art at the time the claimed invention was made that a yeast gene upon expression in plant would produce expected phenotype with a reasonable expectation of success. This is clearly evident from the teachings of Samuelsen et al.

Samuelsen et al. teach that yeast genes can be successfully expressed in plants to obtain expected phenotype and/or enzymatic activity associated with the yeast protein. See in particular, pg 51, abstract; pg 54, figures 1 and 2; pg 55, figure; pg 56, figures 4. The reference also cites additional prior art references to assert that expressing yeast genes in a plant tissue produces expected results (see pg 51, right column, 3rd paragraph).

It is not surprising and unexpected in any transgenic plant analysis that few plants fail to express the introduced trans gene due to gene silencing effects. That does

Art Unit: 1638

not imply that Samuelsen et al. fail to demonstrate that a yeast gene can be successfully expressed in a plant transgenic environment to produce expected phenotype. Applicant is reminded that majority of Samuelsen et al. transgenic plants produced the expected phenotype. Thus Applicant's arguments are not on the point.

It is therefore maintained that at the time the invention was made, it would have been prima facie obvious to one of ordinary skill in the art to modify the method of making a transgenic plant as taught by Lanahan et al., to substitute the coding sequence encoding Lanahan et al. heat-stable thioredoxin protein with a recombinant DNA encoding Gan thioredoxin protein to obtain a transgenic plant and transgenic seed expressing Gan recombinant DNA.

It would have been thus obvious and within the scope of an ordinary skill in the art to over-express Gan glutaredoxin protein in any plant including monocot (maize) or dicot (tomato) plants of Lanahan et al. using any plant transformation method including the one taught by Lanahan et al.

It is further maintained that given Grant et al. teach that glutaredoxin protein (same protein as taught by Gan, emphasis added) are implicated in protecting a cell subjected to an environmental stress (oxidative or osmotic or salinity), one of ordinary skill in the art would have been motivated to over-express Gan nucleic acid sequence encoding glutaredoxin protein in any eukaryotic host cell including a plant cell to produce a transgenic plant cell which is regenerated into a stress-tolerant transgenic plant with a reasonable expectation of success.

Given, it was well known in the art at the time the instantly claimed invention was made that yeast genes can be overexpressed in a plant to produce an expected phenotype as asserted by Samuelsen et al., it would have been obvious and within the scope of an ordinary skill in the art to try to over-express Gan's Oxidoreductase coding sequence in a plant for the purpose of obtaining environmental (salt, drought etc.) stress tolerant transgenic plant with a reasonable expectation of success.

It is further maintained that it would have been obvious and within the scope of an ordinary skill in the art to use Gan nucleic acid sequence encoding the glutaredoxin protein as a DNA marker in any DNA hybridization based technique, such as Southern blot or DNA dot blot analysis to identify stress-tolerant transgenic plant with a reasonable expectation of success.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, one of ordinary skill in the art would have arrived at the claimed invention with a reasonable expectation of success by combining the teachings of cited art.

It is important to note that the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary

Art Unit: 1638

reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981). In this case, one of ordinary skill in the art would have arrived at the claimed invention with a reasonable expectation of success by combining the teachings of cited art.

It is therefore, maintained that the claimed invention as a whole is prima facie obvious over the combined teachings of the prior art.

12. Claims 11 and 15 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Lanahan et al. (WIPO, PCT, WO 00/36126, Published 22 June 2000, Applicant's IDS), and further in view of Gan (Biochem. Biophys. Res. Comm., 187:949-955, 1992), Grant et al. (Biochimica et Biophysica Acta, 1490:33-42, 2000), Samuelsen et al. (Plant Physiol., 118:51-58, 1998) and Stomp et al. (Plant Physiol., 92:1226-1232, 1990) for the reasons of record stated in the Office action mailed 11/06/08.

Applicant traverses the rejection in the paper filed 02/06/09.

Applicant makes the same arguments as discussed above.

It is therefore, maintained that it would have been thus obvious and within the scope of an ordinary skill in the art to over-express Gan glutaredoxin protein in any plant cell or plant including a gymnosperm plant cell or plant using any plant transformation method including the one taught by Stomp et al. to arrive at the claimed invention with a reasonable expectation of success as discussed above.

Art Unit: 1638

Conclusions

13. Claims 1, 5, 8-11, 13, 15, 18-19, 29, 32, 47 and 49 remain rejected.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to VINOD KUMAR whose telephone number is (571)272-4445. The examiner can normally be reached on 8.30 a.m. to 5.00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anne Marie Grunberg can be reached on (571) 272-0975. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

/Phuong T. Bui/
Primary Examiner, Art Unit 1638
